Project Executable Files

Date	10 JULY 2026
Team ID	SWTID-2026-9068
Project Name	SMART LENDER
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA

8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
SmartLender/
|
├── Dataset/
|   ├── loan_prediction.csv
|   ├── loan_prediction.xlsx
|   └── loan_prediction(1).csv
|
├── Flask/
|   ├── app.py
|   ├── app1.py
|   ├── rdf.pkl
|   ├── scale1.pkl
|   ├── static/
|   |   └── css/
|   |       └── style.css
|   ├── templates/
|   |   ├── home.html
|   |   ├── input.html
|   |   ├── output.html
|   |   ├── input(1).html
|   |   └── output(1).html
|   └── requirements.txt
|
├── IBM/
|
├── Training/
|   └── Loan Prediction using Machine Learning.ipynb
|
└── README.md
```

Step 3: Deployment / Access Details

Field	Details

Hosted / Deployed URL	http://192.168.0.143:5000/
Login Credentials (Demo)	NOT REQUIRED
Platform / Hosting Provider	Local host
Repository Link	https://github.com/trivenigude0703/smart-lender
Demo Video Link	https://drive.google.com/file/d/1AIjS3_lCPephGLUtnf6s-9CVUbmVVC3r/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Run Instructions

1. Install Python 3.10 or later on your system.
2. Open the project folder in Visual Studio Code.
3. Open the terminal and navigate to the Flask project directory:

   cd "C:\Smart Bridge Project\Flask"
4. Install the required dependencies:

   pip install -r requirements.txt

   (or install Flask, pandas, numpy, scikit-learn, and joblib if requirehttps://drive.google.com/file/d/1AIjS3_lCPephGLUtnf6s-9CVUbmVVC3r/view?usp=sharingments.txt is unavailable.)
5. Run the Flask application:

   python app1.py
6. Wait until the terminal displays:

   * Running on http://127.0.0.1:5000
7. Open a web browser and visit:

   http://127.0.0.1:5000
8. Enter the applicant's loan details in the SmartLender form.
9. Click the "Predict" button to obtain the loan eligibility prediction generated by the trained Random Forest model.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status

1	Works best with dataset format used during training	Provides input matches the trained dataset
2	Currently predicts only loan eligibility	Future work includes credit score and repayment
3	Runs on flask development server	Can be deployed or render for production
