

## Data Flow Diagram

|                      |                 |
|----------------------|-----------------|
| <b>Date</b>          | 27 June 2026    |
| <b>Team ID</b>       | SWTID-2026-9068 |
| <b>Project Name</b>  | Smart Lender    |
| <b>Maximum Marks</b> | 2 Marks         |

### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                                                                                                     |
|------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | <b>Customer</b> – A user who registers, enters loan details, and receives the loan eligibility and prediction results.                                                                          |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | <b>1. Register/Login, 2. Check Loan Eligibility, 3. AI/ML Loan Prediction, 4. Display Loan Result</b> – These processes collect user data, analyze it using AI/ML, and generate the prediction. |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | <b>User Database, Loan Database, AI/ML Model Database</b> – Stores customer information, loan records, and prediction model data.                                                               |

|                      |                  |                                                                                                                                                                          |
|----------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Labeled arrow</b> | <b>Data Flow</b> | <b>Registration Details, Loan Details, Eligibility Data, Prediction Result, Loan Status</b> – Shows the movement of data between the customer, processes, and databases. |
|----------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
