

Solution Requirements

Date	27 June 2026
Team ID	SWTID-2026-9068
Project Name	Smart Lender
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define the features and functions that the system must perform. They describe **what the system should do** to meet user needs and achieve the project objectives.
- **Non-Functional Requirements (NFR)** define the quality attributes and performance standards of the system. They describe **how the system should perform**, such as its speed, security, reliability, and usability.

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system allows users to register and log in securely to access loan prediction services.	High
2	User Profile	Users can enter personal, financial, and employment details required for loan prediction.	High
3	Loan Eligibility Prediction	The AI/ML model analyzes user details and predicts loan approval eligibility.	High
4	Data Validation	The system validates all user inputs before processing to ensure accurate predictions.	High
5	Result Display	The system displays the loan approval prediction along with the confidence score and status.	High

6	Report Generation	Users can download or print the loan prediction result for future reference.	Medium
7	Data Storage	The system securely stores user details and prediction history in the database.	Medium
8	Admin Management	The administrator can monitor system usage and manage prediction records.	Low

S.No	Requirement Category	Requirement Description	Priority
		feedback for future reference and improvement.	

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should generate loan predictions quickly.	Response time less than 3 seconds
2	Scalability	The system should support multiple users simultaneously.	Supports 100+ concurrent users
3	Security & Data Privacy	User financial and personal data must be securely protected.	Data encryption and secure login
4	Reliability & Availability	The system should provide uninterrupted service with minimal downtime.	99% system availability
5	Usability	The application should have a simple and user-friendly interface.	Users can complete prediction in 3–4 steps
6	Maintainability	The code should be modular and easy to update with new ML models.	Well-documented and reusable code
